

# CLINICAL DIAGNOSTIC REPORT

**Patient:** Diego Loayza

**ID:** 12345678

**Age:** 26 years

**Date:** 02/24/2026

## TRIAGE REPORT (SOAP)

### Automated Clinical Triage Report (SOAP)

---

#### [S] Subjective

**Reason for consultation and history:**\*

\*

> \*'"thoughtThe user wants me to extract medical symptoms from the provided text.The text is: "i got this mole on my shoulder for a few years but recently it started itching a lot i also noticed it looks bigger and the edges are kind blurry now it is not just brown anymore it has some black and reddish spots in it it even bled a tiny bit on my shrt yesterday when i was getting dressed"Symptoms mentioned:1.Itching (a lot)2.Looks bigger (than before)3.Edges are kind blurry4.Not just brown anymore (has black and reddish spots)5.Bled a tiny bitl need to list these symptoms in a single descriptive text string, without any introductory or explanatory text.Symptoms list:- Itching- Bigger- Blurry edges- Black and reddish spots- BleedingCombine them into a single string:"Itching, bigger, blurry edges, black and reddish spots, bleeding"This seems to fit the requirements.Itching, bigger, blurry edges, black and reddish spots, bleeding"

\*

#### [O] Objective

**Image Observations:**\*

\*

The image shows a close-up view of human skin. There is a distinct, irregularly shaped, dark brown to black lesion present on the skin surface. The lesion appears slightly raised and has a rough, uneven texture. The surrounding skin shows some signs of aging, with visible wrinkles and variations in pigmentation.

**Specific Irregularities:**\*

\*

**The lesion exhibits irregular borders, uneven coloration, and a rough, uneven texture.**

#### [A] Assessment

**\* Ranked Pre-diagnosis:**

- 1. Melanoma - Irregular shape, uneven coloration (black, reddish spots), blurry edges, rough texture, itching, and bleeding are highly suspicious for melanoma.**
- 2. Basal Cell Carcinoma - Slightly raised and rough texture could fit, but irregular coloration and blurry edges are less typical.**
- 3. Seborrheic Keratosis - Rough texture could fit, but irregular coloration, blurry edges, itching, and bleeding are less typical.**

\* **Clinical summary (Symptoms + Imaging):** Patient presents with a lesion on the shoulder characterized by irregular shape, uneven coloration (dark brown to black, black and reddish spots), blurry edges, rough texture, and a history of itching, bleeding, and pain. Imaging shows a slightly raised, rough, uneven lesion with irregular borders and uneven coloration.

\* **Suggested urgency level:** High

\* **Note:** This is an AI-generated pre-diagnosis that requires mandatory validation by a human doctor.

#### [P] Plan

\* Action Required:\*

\* Immediate referral for in-person clinical validation by a specialist.

\* \*\*Note:\*\*

\* This is an AI-generated pre-diagnosis that requires mandatory validation by a human doctor.

## FINAL MEDICAL CONCLUSION

Pendiente de revisión médica.

**Recommendations:** Se recomienda correlación clínica con el reporte de triaje.
